

ILLUSTRATION OF FUNCTION: WATERLINE CONTROLS FPT PARAGON SYSTEM

Waterline Controls FPT kits allow the user to maintain NFPA water tank level requirements for the fire protection system. Controlling water levels using only an altitude valve results in significant variance in the water level in the tank, insufficient to meet NFPA safety standards. Waterline Controls FPR kits should be used with altitude valves in the fire protection system.

Some altitude valves have a supplemental activation option via auxiliary solenoid and should be used in all fire protection applications.
